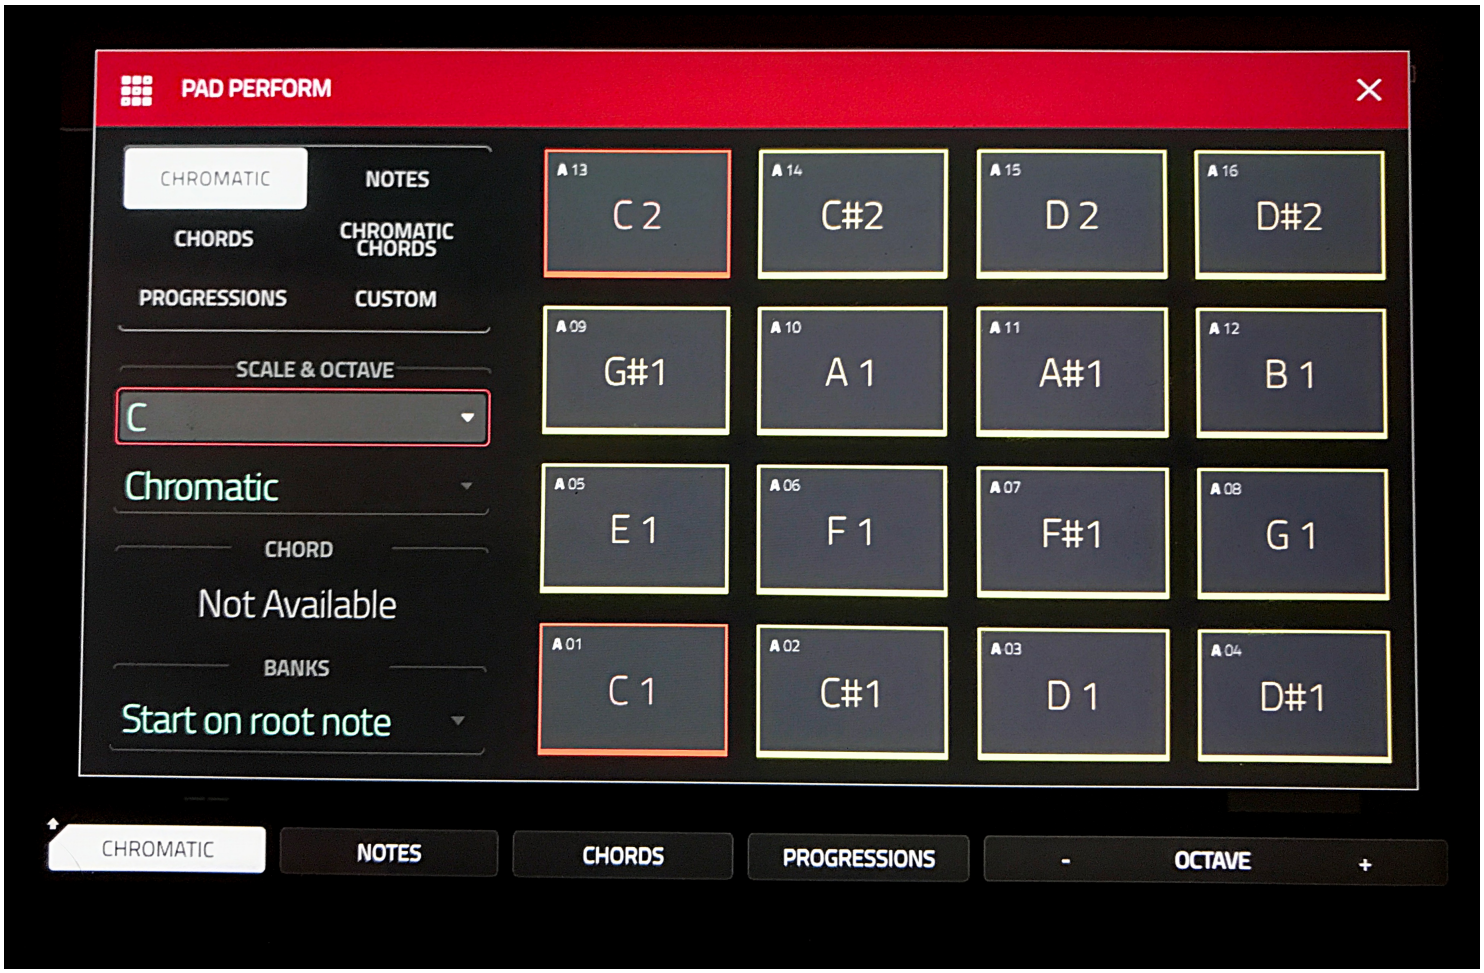
SWEET POINT SAMPLES

First thing you should do after purchasing is to make a backup of the samples, read this manual and work with the backup.

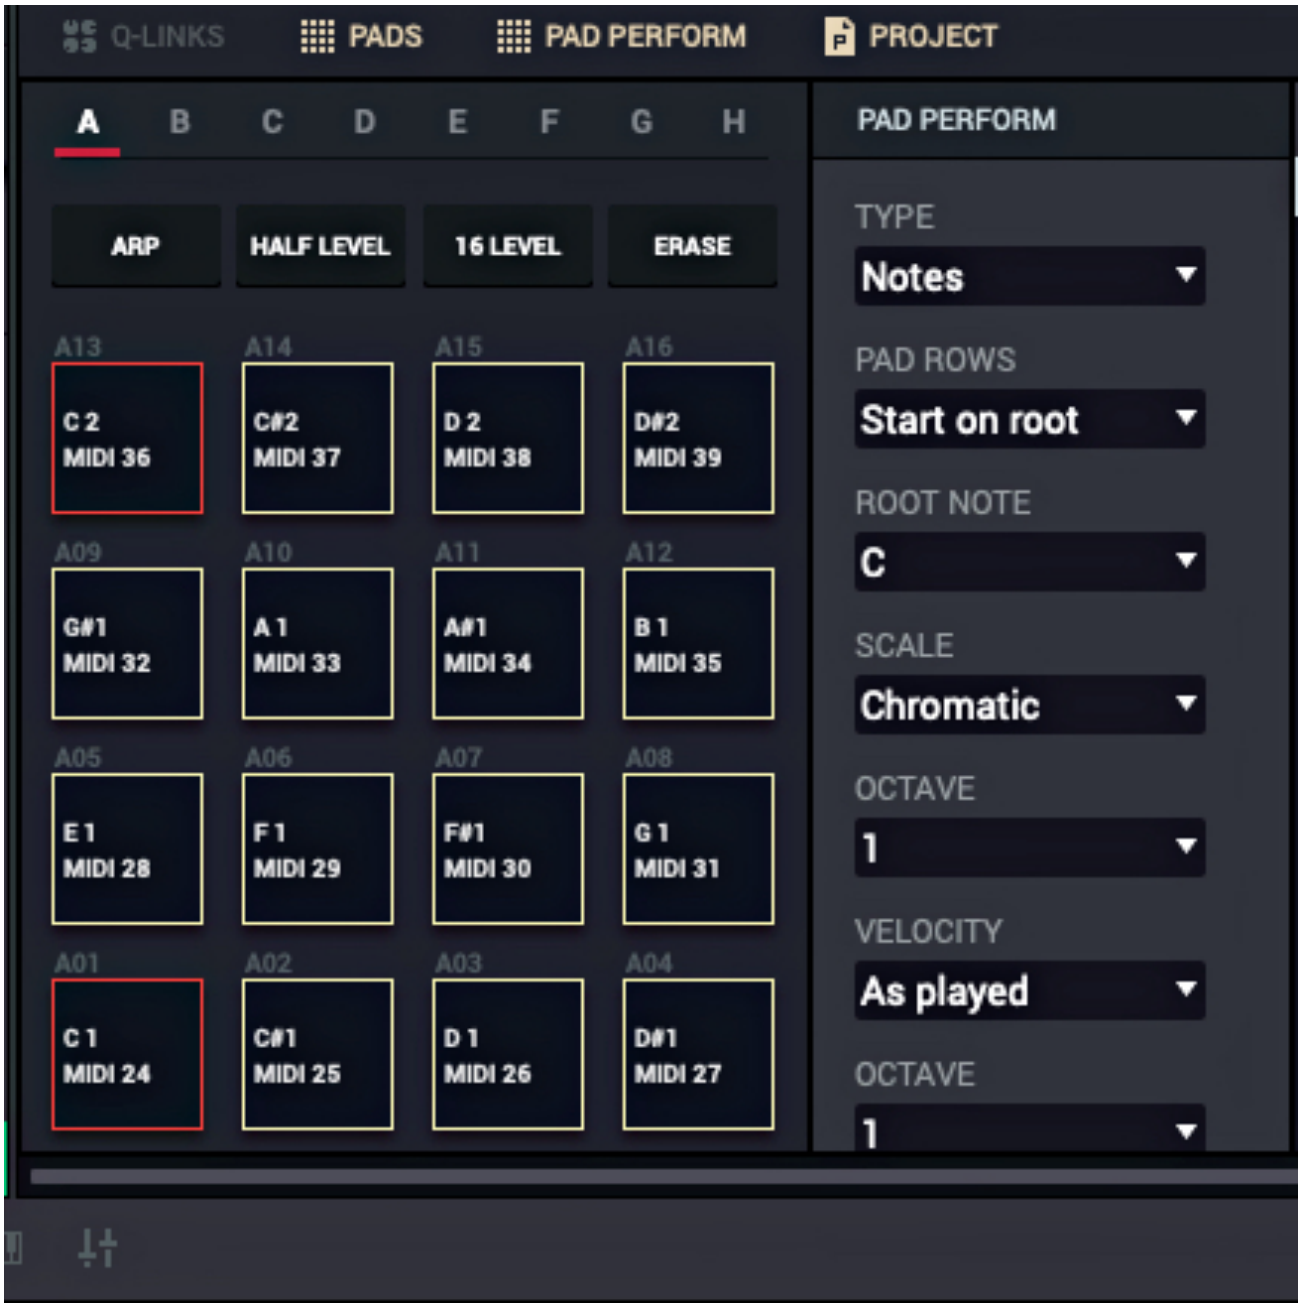
The tuning is chromatic.
The samples start independently of the actual octave tuning on the C1 MPC A-PAD and cover 4 octaves A-D PADs.

Check if the PAD Perform has the correct settings.
To do this, select your PAD A group.
Open the PAD Perform settings.
At the top, select chromatic.
For Scale&Octave select C and chromatic.
Now select the correct Octave for PAD A , set C1 with the - + Octave control.

PAD A 01 starts with C1. PAD Perform should look like the photo below on your MPC hardware



Or should look like on the MPC software



To load a key program, select the MPC browser and the location of the samples.
Each sample folder contains a .xpm file with the same sample name.
Simply double click on the .xpm file

Thank you very much for your purchase and have fun with the samples.
